Frontend engineer with an extensive range of skills and an excellent proficiency in HTML, CSS and JavaScript. Experience with React, SCSS and Git/Github. I am design-oriented and love creating website designs in my spare time using Adobe XD with good UI/UX principles. In contrast to this, I also enjoy implementing functionality with JavaScript and React and improving my problem-solving skills by tackling algorithms and building dynamic websites. Actively looking for my first role as a Jr frontend developer to enhance my skills as I am eager to progress, gain more experience and express my creativity.

SKILLS

- HTML5/CSS3
- JavaScript/ES6
- Sass
- React.js

- Git/GitHub
- Adobe XD
- API's
- JSX

- Problem solver
- Fast learner
- Good communication
- Creative

EXPERIENCE/PROJECTS

Apple Clone – Site | Code

Features:

- Delivered a fully responsive website with mobile menu functionality & footer dropdown list
- Maintained attention to detail throughout the project to achieve an exact Apple replica
- Implemented a mobile toggle button animation using Cubic-Bezier and CSS keyframes
- Deployed and hosted with Netlify

Knowledge acquired:

- Attained knowledge of how to host websites as well as experience navigating the DOM to acquire elements in relation to each other
- Strengthened Sass skills as this was only the second project I've built using Sass

Technologies used: **HTML, Sass, JavaScript, Git, VS code, Netlify**

Personal Portfolio – Site | Code

Features:

- Designed mobile/desktop website interface using Adobe XD
- Utilised the Gsap JavaScript library to include animation to achieve pleasant user experience as well as to allow social links to fix to the side of the page as the user scrolls
- Integrated the Form submission API to send messages to my personal inbox
- Implemented Responsive web design to attain standard practices and convention
- Used the navigator Object to allow users to copy my number/email to the users clipboard

Knowledge acquired:

- Resolved an ongoing animation issue using matchMedia() and saveStyles() JavaScript methods where screen sizes were causing animation to crash, I used these methods to only allow certain animation to function at specific screen-size widths
- Improved my experience of using Sass partials to organise files and manage code

Technologies used: **HTML, Sass, JavaScript, Git, VS code, Netlify**

EDUCATION

Issued 10/2020   **Responsive Web Design Developer Certification** – freeCodeCamp

See credential

- Developed 5 projects to strengthen skills in HTML/CSS

	• Gained proficiency of visual design, accessibility and responsiveness
Issued 00/0000	**JavaScript Algorithms and Data Structures Certification** – freeCodeCamp
	See credential
	• Acquired a detailed understanding of in-depth concepts such as algorithms, data structures, object oriented programming, functional programming, ES6, regular expressions and debugging
Issued 08/2020	**Learn HTML Course** – Codecademy
	See credential
Issued 09/2020	**Learn CSS Course** – Codecademy
	See credential
Issued 10/2020	**Learn JavaScript Course** – Codecademy
	See credential
2011-2016	**10 GCSE's Grades A*-C** – Djanogly City Academy
